

# Guide to DataSets

## StateDataSet

Information provided by the state to inform vendors how to set up the documentation software for the EMS agencies and clinicians. It identifies which data elements are collected, procedures and medications permitted by certification level, state protocols, and facility codes and designations.

## DEMDDataSet

Information the EMS agency provides to the state EMS office about the agency's composition, resources, and requirements. It identifies the number of personnel working in the agency, organization type, the service area, agency procedure and protocols, and more.
