

FOR IMMEDIATE RELEASE

NEMESIS 2022 Public-Release Research Dataset Now Available

Salt Lake City, Utah, April 24, 2023 – The National Emergency Medical Services Information System Technical Assistance Center (NEMESIS TAC) today announced the availability of the 2022 Public-Release Research Dataset, the largest publicly available dataset of emergency medical service activations in the United States.

"We are immensely grateful to the EMS clinicians who work tirelessly to provide critical medical assistance to those in need, and without whom this dataset would not be possible," said Dr. N. Clay Mann, Professor in the Department of Pediatrics at the University of Utah School of Medicine and Principal Investigator for the NEMESIS Technical Assistance Center. "Their dedication and commitment to patient care are an inspiration to us all. With this dataset, we hope to provide a valuable resource that will enable better decision-making and ultimately lead to improved patient outcomes."

The 2022 Public-Release Research Dataset is a subset of the National EMS Database that is the repository for EMS data collected from U.S. States and Territories. NEMESIS maintains the national standard for how patient care information resulting from an emergency 911 call for medical assistance is collected. The dataset includes 51,379,493 EMS activations submitted by 13,946 EMS agencies servicing 54 states and territories.

Those interested in requesting a copy of the 2022 Public-Release Research Dataset can contact the NEMESIS TAC and fill out a request form at their website <https://nemsis.org/using-ems-data/request-research-data>. A password-protected USB drive containing the dataset and supporting materials via postal service.

ABOUT NEMESIS

The National Emergency Medical Services Information System (NEMESIS) is the national health information exchange and database used to collect and store EMS data from states and territories. NEMESIS is a universal standard for how patient care information resulting from an emergency 911 call for medical assistance is collected. It is a collaborative system to improve patient care through the standardization, aggregation, and utilization of point-of-care EMS data at a local, state, and national level.

NEMESIS is a program of the National Highway Traffic Safety Administration's Office of EMS and is hosted at the University of Utah.
